PROFILE

Product-focused Software Developer who ships fast and builds for impact. I turn ideas into **scalable, production-ready systems** and obsess over the details that make software **reliable, efficient, and secure.**

Currently building **internal automation systems** at **Electronicx GmbH**, where I automated **€520K+ worth of returns**, saved **2,000+ staff hours**, and built **real-time microservices** using **Node.js, FastAPI, Docker, and CI/CD pipelines**. Previously built **Studdy-Buddy** — an **AI-powered learning platform** using **Gemini AI + RAG workflows**, and a **secure online examination system** with **live anti-cheating detection** at AptiDude.

3+ years building. 30+ freelance products shipped. I don't chase trends — I build **systems that work. 0 → 1 → 100. Head down, code up, goal clear.**

PROJECTS

Studdy-Buddy 🔗

Next.js, Tailwind, Drizzle ORM, Gemini AI, Stripe, Inngest

- Built an **AI-powered study platform** that generates **notes, flashcards, quizzes**, and **Q&A** from any topic using **Google Gemini AI**.
- Integrated **Stripe payments, Clerk auth, YouTube API, course marketplace**, and **credit-based access** with full **user dashboard**. Used **Inngest** for background jobs and workflows. **(Repo link)** 🔗

YMGS Pharmacy 🔗

MERN Stack, Vite, Tailwind CSS

- Built a full **e-commerce platform** with **frontend, backend**, and **admin panel** for online pharmacy management.
- Features include **multi-gateway payments, guest checkout, blog CMS**, and **order tracking** with **dashboard control**. **(Repo link)** 🔗

HTTP Server 🔗

Go (Golang), HTTP/1.1

- Built a basic **HTTP/1.1 server** from scratch in **Go**, capable of handling **multiple concurrent clients**.
- Implemented **request parsing, response handling**, and learned core concepts of **low-level networking** and the **HTTP protocol**. **(Repo link)** 🔗

FaceQuest 🔗

Python, Telegram Bot, Face Recognition

- Built a face recognition system that finds matching faces from a dataset via a Telegram bot.
- Included **selfie verification, multi-user support** and **database-backed** search history. **(Repo link)** 🔗

SKILLS

React | Next: Front-end Services | **BullMQ | Inngest:** background job processing | **Css:** Tailwind Css |

MongoDB: Go-MongoDriver, Mongoose | **Node.js:** Backend | **Golang:** Microservices | **Git:** Github, Gitlab |

Javascript: Web dev | **SQL:** MySQL and Database | **Docker:** Containers, Images | **Python:** FastApi, Automation

PROFESSIONAL EXPERIENCE

Software developer

Electronicx GmbH 🔗

10/2025 | Hindenburgstr, Germany

- Built an **automated return handling and fraud detection system** that processes **5,000+ returns worth ~€520K+**, eliminating manual review and saving significant labor costs.
- Automated return processing that reduced manual effort by **~90%**, **saving ~2,000+ staff hours** over two years (**~€30K+ in estimated labor savings**).
- Implemented real-time analytics, notifications, and competitor scraping microservices using **Node.js, React, TailwindCSS, FastAPI (Python), Docker, and GitHub Actions**.
- Delivered secure dashboards with **JWT auth, WebSockets**, and **logging/monitoring** for internal workflows.

Full Stack Developer Intern

AptiDude 🔗

02/2025 – 09/2025 | Kharagpur, India

- Built a **secure MERN-based online examination system** with real-time anti-cheating detection (camera tracking, tab-switch monitoring, copy/paste blocking, activity logging).
- Implemented **JWT-based authentication** with multi-tenant support for coaching institutes and cross-platform login.
- Developed an **admin dashboard** for test creation, user management, and performance analytics.
